Data Analysis | Business Analysis | SQL | Python | Power BI | Tableau | AI-Assisted Analytics | Dashboarding | Predictive Analytics

SUMMARY

Data Analytics and Business Analysis professional (AI-Assisted Analyst) with an MBA in Business Analytics & Marketing and a 6-month Analytics Bootcamp with GenAI. Skilled in SQL, Excel, Python, Power BI, and Tableau, and proficient in leveraging AI tools (ChatGPT, Claude) to accelerate analysis, documentation, and reporting, with manual validation to ensure accuracy. Strong business analysis capabilities in requirement gathering, stakeholder communication, and process documentation. Strong ability to transform data into actionable business insights, identify trends, and support data-driven decision-making.

EXPERIENCE

Piramal Finance

Lucknow

Sales & Business Analyst | Sales Manager | 07/2025 - 02/2026

- Built and maintained detailed Excel-based tracking tables as Business Analyst & Sales Manager, monitoring daily performance and targets across a portfolio managed with a team of 5 sales executives.
- Used Power BI to analyse and forecast lending trends, translating data into strategic recommendations that helped the business consistently meet monthly targets.
- Reviewed loan and credit files for eligibility and acceptability while coordinating daily stakeholder follow-ups, supporting accurate, data-backed decisions across the lending portfolio.

PROJECTS

Hospital Healthcare Analytics: MySQL & Power BI

- Analysed patient registration and demographic data (100 patients) using MySQL to inform outreach and preventive-care recommendations, uncovering a sharp acquisition slowdown (13 registrations in Aug 2025 vs. just 1 in Aug 2026) and seniors as the largest segment at 42%.
- Identified Orthopaedics as the highest-demand specialty and recommended reminder systems and capacity adjustments to address a doctor workload imbalance and recover appointments lost to cancellations/no-shows, which together accounted for 25% of all 358 appointments.
- Built an interactive Power BI dashboard (KPI cards, slicers, drill-downs) to analyse ₹10.17 lakh in paid revenue, flag high-cost surgery outliers, and rank patients by spend and no-show behaviour — surfacing 45 pending bills, representing 24% of all billing records.

Retail Sales Analytics: Excel

- Built an interactive Excel sales dashboard (PivotTables, Pivot Charts, slicers, KPI analysis) tracking ₹83.48 lakh revenue and 15.9 lakh units sold across a full year, revealing a year-over-year revenue decline of 1.05%.
- Analysed category and brand performance, finding Yogurt as the dominant category (6.43 lakh units) versus Juice as the weakest, and SnBrand2 as the top brand at ₹14.06 lakh — together spanning a range from 2.9% to 40.5% of total revenue.
- Recommended targeted promotions to lift weak-category and off-season revenue after uncovering seasonal trends (May/July peak vs. November low) and confirming balanced performance across channels and regions, each split nearly evenly at 33%.

Sales Performance & Business Intelligence End-to-End ETL Project: Python, SQL, Power BI

- Cleaned and transformed the dataset in Python (Jupyter Notebook | Pandas), removing duplicate records and creating analytical fields such as Profit, Year, and Month, resulting in 482 clean records — a 7.3% reduction from the raw dataset.
- Analysed sales data using MySQL to evaluate profitability, regional/product performance, customers, and trends, identifying ₹2.06 Cr sales, ₹52.08 lakh profit, and 25.29% margin.
- Built an interactive Power BI dashboard using KPI cards, slicers, and visualizations to analyse sales, profit, regional, product, customer, and monthly performance.
- Used AI tools (ChatGPT, Claude) across all three projects to accelerate SQL/Python query drafting, data cleaning logic, and insight summarization, with manual validation of every output before finalizing findings.

CERTIFICATIONS

- KPMG Lean Six Sigma Green Belt (Issued January 2024)
- PW | NSDC | PwC - Data Analytics with AI Course, 6-Month Bootcamp (Issued July 2026)

SKILLS

SQL: Advanced Joins, CTEs, Window Functions, Subqueries, Data Cleaning, SQL Server, Query Optimization

Python: Pandas, NumPy, Matplotlib, Seaborn, EDA, Statistical Analysis, Jupyter Notebooks

Power BI: Data Modelling, DAX, Power Query (M), KPI Dashboards, Drill-down, Row-Level Security

Excel: Pivot Tables, Power Query, VLOOKUP, INDEX-MATCH, Dynamic Arrays, Automated Reporting

Business Analysis: Requirement Gathering, Stakeholder Communication & Management, Process Improvement (Six Sigma), Documentation Review, Business Insight Reporting

Analytics: Trend Analysis, Anomaly Detection, Root-Cause Analysis, KPI Tracking, A/B Testing, Forecasting, Predictive Analytics

Tableau: Drag-and-Drop Charts, Advanced Chart Creation and Modelling, Calculations, Publishing

AI & GenAI: AI-assisted Analytics, GenAI Insight Summarization, Automated Reporting

Tools: MySQL Workbench, Jupyter Notebook, MS Excel, Power BI Desktop, VS Code, SAP, JIRA, Azure (Basics), GitHub, SharePoint

EDUCATION

MBA in Business Analytics & Marketing - ICFAI University

05/2023 - 02/2025

Jaipur

Bachelor of Arts - Kanpur University

05/2018 - 04/2021

Kanpur
